

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) ~~A method to be executed by a computer system for determining~~ A program stored on a computer-readable medium that causes a computer to execute steps to determine whether a computer-storable expression matches a filter, ~~the method~~ comprising:

evaluating a first code structure representing the expression ~~for determining to~~ determine a value of said expression prior to filtering;

analyzing a second code structure representing the filter ~~for determining to~~ determine the characteristics of the filter; and

filtering said evaluated value according to the filter characteristics,

wherein said first code structure is constructed from a plurality of first programming language code structure elements and said second code structure is constructed from a plurality of second programming language code structure ~~elements; each~~ elements, ~~each~~ second structure element corresponding being symmetrically constructed to correspond to one of said first structure elements, and

wherein evaluating, analyzing and filtering are performed upon explicit invocation of a matching operator, and filtering comprises returning a boolean evaluation result value.

2. (Canceled)

3. (Currently Amended) The ~~method~~ computer-readable medium of claim 1, wherein the second code structure includes at least one composition operator acting as a logical connector for logically combining two of said programming language code structure

elements, or for inverting the boolean value of at least one of said second programming language code structure elements.

4. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the first code structure includes a first concatenation operator for concatenating two expressions, and the second code structure includes a second concatenation operator for concatenating two filter elements, the first and the second concatenation operators being applied within the first code structure and the second code structure, respectively, in essentially the same manner.

5. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the first and the second code structures include indicator elements indicating a data type, the indicator elements acting as structure constructors in the first code structure and as filter constructors in the second code structure, each of the structure constructors corresponding to a respective one of the filter constructors.

6. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the second code structure includes a test operator having an operand, and wherein filtering comprises testing the occurrence of the value of said operand in the expression.

7. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the second code structure includes an existence operator that matching any element that exists.

8. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the second code structure includes an assignment operator having an operand, to assign a part of the expression to a variable that is identified by said operand.

9. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the second code structure includes a Kleene operator.

10. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the second code structure includes a do operator having two arguments, one argument being a filter and the other argument being an instruction or a sequence of instructions, wherein filtering includes executing the instructions only if the filter is successful.

11. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the filter is a recursive filter enabling filtering of trees.

12. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the filter is a normalized filter.

13. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein filtering includes modifying the environment of the computer system, the environment including variables and corresponding values used by the computer system when filtering said value of said expression.

14. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the first code structure and the second code structure are part of an interpreter programming language code.

15. (Currently Amended) The ~~method~~computer-readable medium of claim 1, wherein the first code structure and the second code structure are part of a compiler programming language code.

16-18. (Canceled)
